**Figure 3B** - Areas at Risk of Groundwater Flooding

---

### Notes
- The map represents areas at risk of groundwater flooding based on a model on a 5m grid displaying the likelihood of groundwater flooding greater than 1% annual probability of occurrence (1 in 100 chance each year) at a site due to elevated groundwater levels.
- The map is intended to provide an initial view but does not provide an alternative to a proper site-specific assessment.
- The areas at risk are represented by one of four categories showing areas that are at risk of groundwater emergence.

#### Legend
- **High Risk**: High risk of groundwater flooding in this area with a chance of greater than 1% annual probability of occurrence (1 in 100 chance each year) or more frequent.
- **Moderate Risk**: Moderate risk of groundwater flooding in this area with a chance of greater than 1% annual probability of occurrence (1 in 100 chance each year).
- **Low Risk**: Low risk of groundwater flooding in this area with a chance of greater than 1% annual probability of occurrence (1 in 100 chance each year).
- **Negligible Risk**: Negligible risk of groundwater flooding in this area and any groundwater flooding incidence has a less than 1% annual probability of occurrence (1 in 100 year chance each year).
- Any area that does not fall into the high, moderate, or low risk bands is considered to be at a negligible risk.
