Areas Susceptible to Groundwater Flooding

- < 25%
- > 25% < 50%
- > 50% < 75%
- > 75%

**Notes**

1. Areas Susceptible to Groundwater Flooding (ASGWF) is a strategic scale map showing where groundwater flooding could occur. The map is intended to be used as a guidance tool and not as a definitive indication of flooding risk. The susceptibility levels are based on a combination of geological and hydrogeological conditions in each 1km square grid. The map shows the proportion of each 1km square grid where geological and hydrogeological conditions indicate that groundwater flooding could occur. It does not show the likelihood of groundwater flooding occurring.

2. The absence of values for any grid square means that no part of that square is identified as being susceptible to groundwater emergence.

3. The map identifies areas where further investigation is needed to assess whether groundwater flooding may affect property or infrastructure.

4. This data shown is the Environment Agency dataset ‘Areas Susceptible to Groundwater Flooding’.
