Notes
1. This map shows the predicted likelihood of surface water flooding
based on the Environment Agency's Risk of Flooding from Surface
Water (ROFSW), which may be subject to further analysis in the future.
Further information is provided on the
Environment Agency website (www.gov.uk/environment-agency).
2. The Risk from Surface Water Flooding is divided into categories:
High: each year, the chance of flooding is greater than 1 in 30 (3.3%).
Medium: each year, the chance of flooding is between 1 in 100 (1%)
and 1 in 30 (3.3%).
Low: each year, the chance of flooding is between 1 in 1000 (0.1%)
and 1 in 100 (1%).
3. The potential impact of surface water flooding can vary according to
the depth of the water, and its velocity (speed and direction that it
is flowing in).
4. Surface water flooding happens when rainwater does not drain
away through the normal drainage systems or soak into the ground, but
lies on or flows over the ground instead. This type of flooding can be
difficult to predict as it is hard to forecast exactly where or how much
rain will fall in any storm.
